AS CHEMISTRY

Paper 2 Organic and Physical Chemistry

Time allowed: 1 hour 30 minutes Thursday 23 May 2019 Morning Materials For Examiner's Use For this paper you must have: the Periodic Table/Data Sheet, provided as an insert (enclosed) Question Mark • a ruler with millimetre measurements 1 • a scientific calculator, which you are expected to use where appropriate. 2 Instructions 3 • Use black ink or black ball-point pen.

- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do **not** write outside the box around each page or on blank pages.
- All working must be shown.
- Do all rough work in this book. Cross through any work you do not want to be marked.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 80.

Advice

You are advised to spend about 65 minutes on Section A and 25 minutes on Section B.

• extinguished the flame after a few minutes.

The results for the experiment are shown in Table 1.

| Table 1 | I |
|---------|---|
|---------|---|

| Initial temperature of the water / °C | 19.1 |
|---|---------|
| Initial mass of spirit burner and cyclohexane / g | 192.730 |
| Final mass of spirit burner and cyclohexane / g | 192.100 |

The student determined from this experiment that the enthalpy of combustion of cyclohexane is $-1216 \text{ kJ mol}^{-1}$

Use the data to calculate the final temperature of the water in this experiment.

The specific heat capacity of water = $4.18 \text{ J K}^{-1} \text{ g}^{-1}$ The relative molecular mass (M_r) of cyclohexane = 84.0

[4 marks]

Do not write outside the box

| | Final temperature of the water | °C |

0 4 . 3 Sulfur dioxide is produced in the combustion of fossil fuels. The total emissions of sulfur dioxide in the UK have fallen dramatically since 1970.

Sulfur dioxide is now removed from the flue gases in power stations by reaction with calcium oxide.

$$CaO + SO_2 \rightarrow CaSO_3$$

In 1970, the total UK emissions of sulfur dioxide were 6.49 million tonnes (1 tonne = 1000 kg).

Calculate the mass, in kilograms, of calcium oxide needed to react with this mass of sulfur dioxide.

Give your answer in standard form.

0 9 . 3 Butane can be used as a replacement for CFCs in refrigerators. During its use, the butane is repeatedly converted from liquid to gas and then back to liquid. Liquid butane expands as it turns into a gas. Calculate the volume, in cm³, of 38.8 g of butane gas at 272 K and 101 kPa (the gas constant *R* = 8.31 J K⁻¹ mol⁻¹) (*M*_r of butane = 58.0) Calculate the volume, in cm³, of 38.8 g of liquid butane. (density of liquid butane = 0.60 g cm⁻³)

• Use your answers to calculate the factor by which butane expands in volume when it changes from a liquid to a gas.

Show your working.
