## Pearson Edexcel

Mark Scheme (Results)

Summer 2022

Pearson Edexcel GCE
In Chemistry (8CH0)
Paper 02 Core Organic and Physical Chemistry

## Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications come from Pearson, the world's leading learning company. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk for our BTEC qualifications.
Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

If you have any subject specific questions about this specification that require the help of a subject specialist, you can speak directly to the subject team at Pearson. Their contact details can be found on this link: www.edexcel.com/teachingservices.

You can also use our online Ask the Expert service at www.edexcel.com/ask. You will need an Edexcel username and password to access this service.

## Pearson: helping people progress, everywhere

Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at:
www.pearson.com/uk

Summer 2022
Question Paper Log Number P70809

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.
- Mark schemes will indicate within the table where, and which strands of QWC, are being assessed. The strands are as follows:
i) ensure that text is legible and that spelling, punctuation and grammar are accurate so that meaning is clear
ii) select and use a form and style of writing appropriate to purpose and to complex subject matter
iii) organise information clearly and coherently, using specialist vocabulary when appropriate.

## Using the Mark Scheme

Examiners should look for qualities to reward rather than faults to penalise. This does NOT mean giving credit for incorrect or inadequate answers, but it does mean allowing candidates to be rewarded for answers showing correct application of principles and knowledge. Examiners should therefore read carefully and consider every response: even if it is not what is expected it may be worthy of credit.

The mark scheme gives examiners:

- an idea of the types of response expected
- how individual marks are to be awarded
- the total mark for each question
- examples of responses that should NOT receive credit.
/ means that the responses are alternatives and either answer should receive full credit.
( ) means that a phrase/word is not essential for the award of the mark, but helps the examiner to get the sense of the expected answer.
Phrases/words in bold indicate that the meaning of the phrase or the actual word is essential to the answer.
ecf/TE/cq (error carried forward) means that a wrong answer given in an earlier part of a question is used correctly in answer to a later part of the same question.

Candidates must make their meaning clear to the examiner to gain the mark. Make sure that the answer makes sense. Do not give credit for correct words/phrases which are put together in a meaningless manner. Answers must be in the correct context.

## Quality of Written Communication

Questions which involve the writing of continuous prose will expect candidates to:

- write legibly, with accurate use of spelling, grammar and punctuation in order to make the meaning clear
- select and use a form and style of writing appropriate to purpose and to complex subject matter
- organise information clearly and coherently, using specialist vocabulary when appropriate.

Full marks will be awarded if the candidate has demonstrated the above abilities.
Questions where QWC is likely to be particularly important are indicated (QWC) in the mark scheme, but this does not preclude others.

| Question <br> Number | (he only correct answer is A (The minimum energy required for a reaction to take place when <br> reactant molecules collide) | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 ( a ) ( i )}$ | B is not correct because very little energy is required for molecules to collide, but they just bounce off one <br> another <br> C is not correct because not all collisions result in a reaction under most conditions, the particles bounce off <br> one another | (1) |
| D is not correct because particles can collide with the appropriate orientation with very little energy so will <br> bounce off one another unless there is enough energy in the collision |  |  |

| Question <br> Number | Answer |  | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: | :---: |
| 1(a)(ii) | An answer that makes reference to the following points: <br> - (at higher temperature) the peak shifts to the right and is lower <br> - because at higher temperatures there are more particles with higher energy | (1) <br> (1) | Allow reverse arguments for lower temperatures <br> Allow at higher temperatures the particles are distributed over a wider range (of energies) <br> Allow fewer particles are present at the modal / average temperature <br> If no other mark is scored allow at higher temperature / $T_{2}$ (on average) the particles have greater (kinetic) energy <br> Ignore comments about the area under the curves Ignore comparisons of activation energy or particles which have the activation energy Ignore discussion of collisions and/or rate of reaction | (2) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 ( a ) ( i i i )}$ | The only correct answer is D (there are more collisions, all of which are successful, at a higher temperature) | (1) |
|  | A is not correct because the number of particles under the curve are those which can react in a collision and there <br> are more at a higher temperature |  |
|  | B is not correct because on average particles have more energy so a larger percentage of collisions are <br> successful at a higher temperature |  |
| C is not correct because more collisions result in more successful collisions giving a faster rate of reaction |  |  |$\quad$.

| Question Number | Answer |  | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: | :---: |
| 1(b)(i) | - position of reactants and products with labels <br> - two curves with at least one correctly labelled as catalysed or uncatalysed <br> - approximately vertical arrow from approximately the reactant line to nearly the height of the top of one or both of the curves labelled $E_{a}$ / activation energy <br> - approximately vertical arrow from reactant line to products line labelled energy change / enthalpy change / $\Delta \mathrm{H}$ | (1) <br> (1) <br> (1) <br> (1) | Allow any suitable equivalent labels Ignore any transition states, labelled or not <br> Do not award straight lines for curves <br> Penalise double headed arrow once only <br> Do not award the arrow in the wrong direction <br> Do not award $-\Delta \mathrm{H}$ instead of $\Delta \mathrm{H}$ <br> For an endothermic reaction do not award M1 | (4) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| 1(b)(ii) | An answer that makes reference to the <br> following points: <br> - a catalyst lowers the activation energy <br> (for the reaction without being used <br> up by it) | Ignore just 'provides an alternative pathway' <br> Do not award lowers the activation energy <br> without taking part in the reaction | (1) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 ( c )}$ | The only correct answer is $\mathbf{D}$ (is often a porous material, so increasing the surface area) <br> $\boldsymbol{B}$ is not correct because the yield at equilibrium is not affected by the catalyst <br> C is not correct because a heterogenous catalyst is in a different phase, while a homogeneous catalyst is in <br> the same phase | (1) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 2(a) | An answer that makes reference to two of the following points: <br> - recycling <br> - incineration to release energy <br> - as a feedstock for cracking | Allow remoulding <br> Allow made into other items / description of recycling <br> Allow for burning as a fuel Ignore just 'for incineration' <br> Ignore just 'as a feedstock' | (2) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| 2(b) | An answer that makes reference to the following <br> point: | Correct answers will include monomer, <br> polymer or words describing bonding / <br> joining / linking of the vinyl chloride <br> Allow pvc for polyvinyl chloride <br> throughout | (1) |
| - Vinyl chloride is the monomer from which <br> (the polymer) polyvinyl chloride is made <br> Or <br> the polymer polyvinyl chloride is made <br> from the (monomer) vinyl chloride | Allow many vinyl chloride molecules joined / <br> bonded together to make polyvinyl chloride <br> Allow vinyl chloride is the repeat unit in <br> polyvinyl chloride |  |  |

| Question <br> Number | Answer | Mark |
| :---: | :---: | :---: |
| 2(c) | The only correct answer is C ( <br> $\boldsymbol{A}$ is not correct because this is the structure of the polymer and does not show three repeat units <br> $\mathbf{B}$ is not correct because it is one and a half repeat units <br> $\mathbf{D}$ is not correct because this is three polymer molecules joined together due to the $n$ after the brackets | (1) |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 3(a)(i) | - calculation of energy associated with bond breaking <br> - calculation of energy associated with bond formation <br> - calculation of the enthalpy change of combustion by subtraction and a negative sign | Example of calculation $\begin{aligned} & =(22 \times 413)+(9 \times 347)+(15.5 \times 498) \\ & =19928(\mathrm{~kJ})(\text { ans } 1) \\ & =(20 \times 805)+(22 \times 464) \\ & =26308(\mathrm{~kJ})(\text { ans } 2) \end{aligned}$ <br> Ignore minus sign $\begin{aligned} & =(\text { ans } 1)-(\text { ans } 2) \\ & =19928-26308 \\ & =-6380\left(\mathrm{~kJ} \mathrm{~mol}^{-1}\right) \end{aligned}$ <br> Ignore units even if incorrect Allow TE throughout but for M3 do not award positive values Ignore SF except 1 SF Correct answer with no working scores (3) $(+) 6380\left(\mathrm{~kJ} \mathrm{~mol}^{-1}\right)$ with no working scores (2) | (3) |

| Question <br> Number | Answer | Additional Guidance | Mark |  |
| :--- | :--- | :--- | :--- | :---: |
| 3(a)(ii) | An answer that makes reference to the following <br> points: <br> - use of mean bond enthalpy values rather <br> than actual values for the molecules <br> involved | (1) | Ignore just 'mean bond enthalpies are <br> not accurate' without qualification | (2) |
| substances in the wrong state for bond <br> energy calculations | (1) | Allow water / decane is a liquid / not a <br> gas |  |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| 3(b)(i) | The only correct answer is $\mathbf{C}(\mathrm{NO} \bullet$ is a species with an unpaired electron) | (1) |
|  | $\boldsymbol{A}$ is not correct because nitrogen dioxide, $\mathrm{NO}_{2}$, is formed during this reaction |  |
|  | B is not correct because this would be $\mathrm{NO}^{-} . \mathrm{NO} \bullet$ has 15 protons, 15 neutrons and 15 electrons |  |
|  | $\mathbf{D}$ is not correct because radicals such as this are made by homolytic fission |  |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 3(b)(ii) | - correct substances <br> - correct balancing | Example of equation $\begin{aligned} & 2 \mathrm{C}_{10} \mathrm{H}_{22}+62 \mathrm{NO} \rightarrow 20 \mathrm{CO}_{2}+22 \mathrm{H}_{2} \mathrm{O}+31 \mathrm{~N}_{2} \\ & \text { Ignore a dot on } \mathrm{NO} \\ & \text { ALLOW multiples } \end{aligned}$ | (2) |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 3(b)(iii) | An answer that makes reference to the following point: <br> - oxygen is present and so $\mathrm{C}_{10} \mathrm{H}_{22}$ / intermediate compounds might react with oxygen <br> Or <br> NO might react with CO | Allow there is (enough) oxygen for complete combustion <br> Allow the reaction must occur in a series of steps as there are too many particles reacting in the equation <br> Allow it is unlikely for the reactants to be in the correct ratio <br> Allow it is unlikely there will be enough NO / decane Allow reactants can react in other ways giving formation of other named products (such as CO, C, $\mathrm{NO}_{\mathrm{x}}$ ) <br> Allow NO may react with other substances / air / oxygen <br> to form $\mathrm{NO}_{\mathrm{x}}$ / oxides of nitrogen / other nitrogen containing products | (1) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 4(a)(ii) | - temperature rise read from graph | $26.7-20.1=6.6\left({ }^{\circ} \mathrm{C}\right)$ <br> Allow maximum temperature shown by graph - 20.1 or temperature from line of best fit at $0 \mathrm{~cm}^{3}$ added when these are not the same <br> BUT do not award temperature rises which include subtraction of 20.0 unless the lines of best fit indicate this. <br> Ignore SF except 1SF | (1) |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 4(a)(iii) | - gives correct volume added at endpoint from the graph (accurate to half a square) <br> - finds moles of acid added | Example of calculation $=39 \mathrm{~cm}^{3}$ <br> Do not award $40 \mathrm{~cm}^{3}$ unless the lines of best fit indicate this value $=\frac{39}{1000} \times 1.10=0.0429 / 4.29 \times 10^{-2}(\mathrm{~mol})$ <br> Ignore units, even if incorrect <br> Allow TE on first volume given, e.g. <br> Use of $80 \mathrm{~cm}^{3}$ as volume giving 0.088 moles scores <br> (1) | (2) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 4(a)(iv) | - use of energy change $=m \times c \times \Delta T$ <br> - calculation of energy change per mole <br> - final answer with correct sign and units | Example of calculation $\begin{align*} & (30+39) \times 4.18 \times 6.6=1903.6 / 1.9036 \times 10^{3}(\mathrm{~J})  \tag{1}\\ & =\frac{1903.6}{0.0429}=44372\left(\mathrm{~J} \mathrm{~mol}^{-1}\right) \\ & -44372 \mathrm{~J} \mathrm{~mol}^{-1} /-44400 \mathrm{~J} \mathrm{~mol}^{-1} \\ & \quad /-44.372 \mathrm{~kJ} \mathrm{~mol}^{-1} /-44.4 \mathrm{~kJ} \mathrm{~mol}^{-1} \end{align*}$ <br> Allow TE throughout from the graph in (a)(i) and calculations in (a)(ii) and (a)(iii) Ignore SF except 1 SF | (3) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| 4(b)(i) | The only correct answer is C (exothermic so energy is absorbed by the water) | (1) |
|  | $\boldsymbol{A}$ is not correct because the reaction is exothermic not endothermic |  |
| $\boldsymbol{B}$ is not correct because the reaction is exothermic not endothermic and energy is absorbed not released by |  |  |
| the water |  |  |
| $\boldsymbol{D}$ is not correct because energy is absorbed not released by the water |  |  |$\quad$.

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| 4(b)(ii) | An answer that makes reference to the following <br> point: | Allow the heat energy is shared over a larger <br> volume <br> (no further release of energy so colder) <br> solution being added cools the reaction <br> mixture <br> OR <br> Added ethanoic acid is at a lower <br> temperature than the reaction mixture has stopped so no more | Ignore heat loss |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| 5(a)(i) | An answer that makes reference to the following <br> point: <br> $\bullet \mathrm{HCl}((\mathrm{g})) /$ hydrogen chloride (gas) | Do not award hydrochloric acid $/ \mathrm{HCl}(\mathrm{aq}) /$ <br> chlorine $/ \mathrm{Cl} / \mathrm{Cl}$ <br> If name and formula are both given, both <br> must be correct | (1) |

| Question Number | Answer |  | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: | :---: |
| 5(a)(ii) | An answer that makes reference to the following points: <br> - dipole present on hydrogen chloride <br> - arrow from $\mathrm{C}=\mathrm{C}$ bond to H or to where bond will be and arrow from $\mathrm{H}-\mathrm{Cl}$ bond to, or just beyond, Cl <br> - correct carbocation intermediate <br> - arrow from lone pair on chloride ion to positive carbon in carbocation (to give correct product) | (1) <br> (1) <br> (1) <br> (1) | Allow TE for use of $\mathrm{Cl}_{2}$ in (a)(i), but max (3) if chloroethane is formed as the product Use of the wrong alkene (e.g. propene) or the wrong hydrogen halide (e.g. HBr) cannot score M4 | (4) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| 5(b)(i) | An answer that makes reference to the following <br> points: <br> - chlorine $/ \mathrm{Cl}_{2}$ and ultraviolet / uv (light) | Allow sunlight <br> lgnore chlorine radicals <br> lgnore temperatures <br> Do not award presence of an additional <br> catalyst <br> Do not award hydrogen chloride / $\mathrm{HCl} /$ <br> hydrochloric acid $/ \mathrm{HCl}(\mathrm{aq})$ | (1) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{5 ( b ) ( i i ) ~}$ | The only correct answer is C (free radical substitution) | (1) |
|  | $\boldsymbol{A}$ is not correct because as ethane is saturated the reaction is a substitution |  |
|  | B is not correct because as ethane is saturated the reaction is a substitution |  |
|  | D is not correct because as ethane has no bonds with significant polarity the reaction is not nucleophilic |  |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 5(b)(iii) | - chloroethane reacts with a chlorine radical <br> OR <br> both correct structure formulae of the products including identification of which is which <br> - formation of 1,1-dichloroethane via radical mechanism <br> OR <br> overall equation for the formation of 1,1dichloroethane <br> - formation of 1,2-dichloroethane via radical mechanism <br> OR | Allow radical dots anywhere on the radical species throughout $\mathrm{CH}_{3} \mathrm{CH}_{2} \mathrm{Cl}+\mathrm{Cl} \cdot \rightarrow \cdot \mathrm{CH}_{2} \mathrm{CH}_{2} \mathrm{Cl}+\mathrm{HCl}$ or $\mathrm{CH}_{3} \mathrm{CH}_{2} \mathrm{Cl}+\mathrm{Cl} \bullet \rightarrow \mathrm{CH}_{3} \mathrm{CHCl} \cdot+\mathrm{HCl}$ <br> Allow $\mathrm{C}_{2} \mathrm{H}_{5} \mathrm{Cl}+\mathrm{Cl} \cdot \rightarrow \mathrm{C}_{2} \mathrm{H}_{4} \mathrm{Cl} \cdot+\mathrm{HCl}$ <br> $\mathrm{CH}_{3} \mathrm{CHCl}_{2}$ 1,1-dichloroethane $\mathrm{CH}_{2} \mathrm{ClCH}_{2} \mathrm{Cl}$ 1,2-dichloroethane $\mathrm{CH}_{3} \mathrm{CHCl} \cdot+\mathrm{Cl} \cdot \rightarrow \mathrm{CH}_{3} \mathrm{CHCl}_{2}$ <br> or <br> $\mathrm{CH}_{3} \mathrm{CHCl} \cdot+\mathrm{Cl}_{2} \rightarrow \mathrm{CH}_{3} \mathrm{CHCl}_{2}+\mathrm{Cl} \cdot$ Ignore reactions of $\mathrm{C}_{2} \mathrm{H}_{4} \mathrm{Cl} \cdot$ $\mathrm{CH}_{3} \mathrm{CH}_{2} \mathrm{Cl}+\mathrm{Cl}_{2} \rightarrow \mathrm{CH}_{3} \mathrm{CH}_{2} \mathrm{Cl}_{2}+\mathrm{HCl}$ $\cdot \mathrm{CH}_{2} \mathrm{CH}_{2} \mathrm{Cl}+\mathrm{Cl} \rightarrow \mathrm{CH}_{2} \mathrm{ClCH}_{2} \mathrm{Cl}$ <br> or $\cdot \mathrm{CH}_{2} \mathrm{CH}_{2} \mathrm{Cl}+\mathrm{Cl}_{2} \rightarrow \mathrm{CH}_{2} \mathrm{ClCH}_{2} \mathrm{Cl}+\mathrm{Cl} \bullet$ | (3) |

equation for the formation of 1,2dichloroethane
$\mathrm{CH}_{3} \mathrm{CH}_{2} \mathrm{Cl}+\mathrm{Cl}_{2} \rightarrow \mathrm{CH}_{3} \mathrm{CHCl}_{2}+\mathrm{HCl}$
(1)

If M2 and M3 are not scored allow (1) for a balanced equation for the reaction of $\mathrm{C}_{2} \mathrm{H}_{4} \mathrm{Cl} \cdot$ with $\mathrm{Cl} \cdot$ or $\mathrm{Cl}_{2}$ to form $\mathrm{C}_{2} \mathrm{H}_{4} \mathrm{Cl}_{2}$ (examples shown)
$\mathrm{C}_{2} \mathrm{H}_{4} \mathrm{Cl} \cdot+\mathrm{Cl} \cdot \rightarrow \mathrm{C}_{2} \mathrm{H}_{4} \mathrm{Cl}_{2}$
or
$\mathrm{C}_{2} \mathrm{H}_{4} \mathrm{Cl} \cdot+\mathrm{Cl}_{2} \rightarrow \mathrm{C}_{2} \mathrm{H}_{4} \mathrm{Cl}_{2}+\mathrm{Cl} \cdot$

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 5(b)(iv) | An answer that makes reference to the following points: <br> - 98 peak is due to $\mathrm{C}_{2} \mathrm{H}_{4}{ }^{35} \mathrm{Cl}_{2}^{+}$ and 102 peak is due to $\mathrm{C}_{2} \mathrm{H}_{4}{ }^{37} \mathrm{Cl}_{2}^{+}$ <br> - 100 peak is due to $\mathrm{C}_{2} \mathrm{H}_{4}{ }^{35} \mathrm{Cl}^{37} \mathrm{Cl}^{+}$ | Allow $\mathrm{C}_{2} \mathrm{H}_{4}{ }^{35} \mathrm{Cl}^{35} \mathrm{Cl}^{+}$ <br> Allow $\mathrm{C}_{2} \mathrm{H}_{4}{ }^{37} \mathrm{Cl}^{37} \mathrm{Cl}^{+}$ <br> Allow structural formulae of the molecular ions of either 1,1- or 1,2-dichloroethane or both <br> Allow structures with the positive charge anywhere including outside of brackets of any type. <br> Penalise omission of + once only | (2) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| 5(b)(v) | An answer that makes reference to the following <br> point | Answer must refer to the isotopes of chlorine. <br> lgnore comments about isotopes of carbon or <br> hydrogen or just isotopes | (1) |
| Allow a larger proportion of chlorine atoms are |  |  |  |
| chlorine-35 than chlorine-37 |  |  |  |
| Allow the ratio of the peak heights to be 9:6:1 |  |  |  |
| Allow the abundance of chlorine-35 and |  |  |  |
| chlorine-37 are different |  |  |  |
| Allow there are two isotopes of chlorine |  |  |  |$\quad$|  |
| :--- |

| Question <br> Number | Answer |  | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: | :---: |
| 5(b)(vi) | An answer that makes reference to the following points: <br> Either <br> - the peaks are formed by fragments containing both chlorine atoms attached to one carbon atom or <br> the fragments are $\mathrm{CH}^{35} \mathrm{Cl}^{37} \mathrm{Cl}^{+}, \mathrm{CH}^{35} \mathrm{Cl}_{2}^{+}$ and $\mathrm{CH}^{37} \mathrm{Cl}_{2}^{+}$ <br> - this fragmentation / configuration is only possible from 1,1-dichloroethane / is not possible from 1,2-dichloroethane <br> Or <br> - the peaks at 83,85 and 87 represent the loss of a $\mathrm{CH}_{3}$ group <br> - only 1,1-dichloroethane has a methyl group | (1) | Allow a diagram showing the fragmentation of 1,1- dichloromethane to form a fragment containing one carbon and two chlorine atoms <br> Allow the use of molecule instead of fragment <br> Do not award fragments where the number of hydrogens on the carbon changes <br> Allow just $\mathrm{CHCl}_{2}^{+}$ <br> Do not penalise the absence of the positive charge <br> Do not award fragments where the number of hydrogens changes to allow for the different masses <br> Allow only 1,1-dichloroethane has two chlorines on the same carbon / 1,2dichlorethane does not have two chlorines on the same carbon <br> Allow the peaks are 15 below the molecular ion values so they represent the loss of a $\mathrm{CH}_{3}$ group | (2) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{6 ( a )}$ | An answer that makes reference to the following <br> point: <br> - $\mathrm{PCl}_{5} /$ phosphorus(V) chloride / <br> phosphorus pentachloride | Allow thionyl chloride $/ \mathrm{SOCl}_{2}$ <br> Allow phosphorus(III) chloride $/ \mathrm{PCl}_{3} /$ <br> phosphorus trichloride <br> Ignore phosphorus chloride <br> If name and formula are given both <br> must be correct | (1) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 6(b) | An answer that makes reference to the following <br> points: <br> - a separating funnel (with or without a <br> stopper or bung) | (1) | Allow any shape separating funnel with a <br> tap at the bottom (no label required) with a <br> bung, stopper or appropriate joint / gap at <br> the top. <br> Allow anything labelled as a tap |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 6(c)(i) | An answer that makes reference to the following point: <br> - carbon dioxide / $\mathrm{CO}_{2}$ | Ignore references to limewater turning cloudy | (1) |
| Question <br> Number | Answer | Additional Guidance | Mark |
| 6(c)(ii) | An answer that makes reference to the following point: <br> - $\mathrm{H}^{+} / \mathrm{H}_{3} \mathrm{O}^{+}$ | Ignore 'hydrogen ion' Ignore numbers before e.g. $2 \mathrm{H}^{+}$ | (1) |

| Question Number | Answer |  | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: | :---: |
| 6(c)(iii) | An answer that makes reference to the following points: <br> - mixed with an appropriate named drying agent, e.g. (anhydrous) calcium chloride / $\mathrm{CaCl}_{2}$ / (anhydrous) magnesium sulfate / $\mathrm{MgSO}_{4}$ / (anhydrous) sodium sulfate / $\mathrm{Na}_{2} \mathrm{SO}_{4}$ / silica gel <br> - leave until the solution becomes clear / left until added drying agent remains powdered / left until added drying agent does not clump together <br> or <br> decant the liquid / filter the solid (to separate from the drying agent | (1) <br> (1) | M 2 is dependent on a drying agent being added in M1 <br> Do not award sodium hydroxide, potassium hydroxide, anhydrous copper sulfate, anhydrous cobalt chloride, calcium sulfate, calcium carbonate, potassium sulfate | (2) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| 6(d)(i) | An answer that makes reference to the following <br> point: | Allow $48-54\left({ }^{\circ} \mathrm{C}\right)$ <br> Allow a range within these limits to <br> include $51\left({ }^{\circ} \mathrm{C}\right)$ <br> Do not award just $51\left({ }^{\circ} \mathrm{C}\right)$ | (1) |

| Question Number | Acceptable Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| *6(d)(ii) | This question assesses a student's ability to show a coherent and logically structured answer with linkages and fully-sustained reasoning. <br> Marks are awarded for indicative content and for how the answer is structured and shows lines of reasoning. <br> The following table shows how the marks should be awarded for indicative content. | Guidance on how the mark scheme should be applied: <br> The mark for indicative content should be added to the mark for lines of reasoning. <br> For example, an answer with five indicative marking points, which is partially structured with some linkages and lines of reasoning, scores 4 marks (3 marks for indicative content and 1 mark for partial structure and some linkages and lines of reasoning). <br> If there are no linkages between points, the same five indicative marking points would yield an overall score of 3 marks ( 3 marks for indicative content and no marks for linkages). | (6) |

| Question Number | Acceptable Answer |  | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: | :---: |
| *6(d)(ii) <br> contd | The following table shows how the marks should be awarded for structure and lines of reasoning. |  | In general it would be expected that 5 or 6 indicative points would get 2 reasoning marks, and 3 or 4 indicative points would get 1 mark for reasoning, and 0,1 or 2 indicative points would score zero marks for reasoning. <br> Reasoning marks may be reduced for extra incorrect chemistry <br> Ignore stated errors which are not present |  |
|  |  | Number of marks awarded for structure of answer and sustained line of reasoning |  |  |
|  | Answer shows a coherent and logical structure with linkages and fully sustained lines of reasoning demonstrated throughout. | 2 |  |  |
|  | Answer is partially structured with some linkages and lines of reasoning. | 1 |  |  |
|  | Answer has no linkages between points and is unstructured. | 0 |  |  |
|  | Indicative content: |  |  |  |
|  | - IP1 add anti-bumping granules |  |  |  |

- IP2 to prevent the formation of large bubbles / rapid heating / transfer of reaction mixture to collecting vessel (leading to impure product)
- IP3 the thermometer should be opposite the entrance of the condenser
- IP4 collecting over the wrong temperature range (therefore impure or the wrong product)
- IP5 add more ice-water mixture
- IP6 ensure you collect as much product as possible

| 6(e) | Method 1 <br> - calculation of the mass of 2-chloro-2methylpropane collected <br> - calculation of the moles of 2-chloro-2methylpropane collected <br> - calculation of the maximum moles of 2-chloro-2-methylpropane possible <br> - calculation of the percentage yield <br> Method 2 <br> - calculation of the moles of 2-methylpropan-2-ol <br> - calculation of maximum mass of 2-chloro-2-methylpropane possible <br> - calculation of maximum volume of 2 -chloro-2-methylpropane <br> - calculation of the percentage yield | (1) <br> (1) <br> (1) <br> (1) <br> (1) <br> (1) <br> (1) <br> (1) | Example of calculation: $\begin{aligned} & =11.6 \times 0.84=9.744(\mathrm{~g}) \\ & =\frac{9.744}{92.5}=0.10534 / 0.105(\mathrm{~mol}) \\ & =\frac{12.00}{74}=0.16216 / 0.162(\mathrm{~mol}) \\ & =\frac{0.10534}{0.16216} \times 100=64.961 / 65.0(\%) \\ & =\frac{12.00}{74}=0.16216 / 0.162(\mathrm{~mol}) \\ & =0.16216 \times 92.5 \\ & =\frac{14.998 / 15.0(\mathrm{~g})}{} \\ & =\frac{14.998}{0.84} \\ & =17.855\left(\mathrm{~cm}{ }^{3}\right) \\ & =\frac{11.6}{17.855} \times 100=64.968 / 65.0(\%) \end{aligned}$ | (4) |

Method 3

- calculation of the mass of 2-chloro-2methylpropane collected
- calculation of the moles of 2-chloro-2methylpropane collected
- calculation of mass of methylpropan-2-ol if yield were 100\%
- calculation of percentage yield
$=11.6 \times 0.84=9.744(\mathrm{~g})$
$=\underline{9.744}=0.10534 / 0.105(\mathrm{~mol})$
92.5
$=0.10534 \times 74=7.7952(\mathrm{~g})$
$=\underline{7.7952} \times 100=64.960 / 65.0(\%)$ 12.0

Other variations on these methods are possible

Final answer which rounds to 65.0 \% with some relevant working scores (4)

ALLOW TE throughout but do not award M4 for yields over 100\%
Ignore SF except 1 SF
